About this project

Abstract Dúchas Na Gaillimhe Galway Civic Trust along with tourism Ireland carry out walking tours of Galway city to inform tourists of Galway's history. One of the walks they offer tourists during the summer months is a medieval walking tour of Galway city. This walk visits seven locations starting at Galway's Latin Quarter. However, this limits tourists to attend lead tours at certain hours as well as only being available frequently during the summer tourism season.

This project aims to deliver a solution which helps the tourists of Galway city carry out the medieval walking tour of Galway city without the need of a guide and available at any time of the year. If the tourist wishes to seek further information they can drop into Dúchas Na Gaillimhe Galway Civic Trust office which is located at one of the stops, The Hall Of the Red Earl.

The proposed solution will be comprised of a mobile application which will allow users to be guided around Galway city. It will show the user their location vs. the destination they must reach. On arrival to the destination, give the user information and images on the location. A user can find out extra information if they wish. There will also be a web application used by Galway Civic Trust to update the information on the application public to all users.
